SUMMARY

Principal product manager with 11+ years shipping AI/ML products at scale: an agentic AI platform in Keystone's AI startup (**$7.5M ARR**) and ML, fraud-risk and partner API products at Amazon (**$71M revenue**, **50K+ customers**), with B2B pricing and 0→1 launches.

EXPERIENCE — 2015 - Present (11 years)

Keystone.ai | *AI division of Keystone, a 20+ year tech and economics advisory firm (450+ employees, PE-backed)*

Principal Product Manager-Technical — *2024 - Present*

- Led 0→1 product strategy and roadmap for an enterprise AI supply chain platform (predictive forecasting models and agentic workflows), influencing C-suite executives to pivot from consulting to a product-led model and directing 30+ engineers and data scientists; reached **$7.5M ARR** and **$25M in annualized client savings** across 5 Fortune 500 clients.
- Defined the B2B business model, value-based modular pricing and monetization, and go-to-market with Sales, Finance, and the CEO, rejecting usage- and savings-based pricing; **2 clients upgraded to agents (+$500K ACV each)**.
- Persuaded leadership and investors to deploy as a managed service in clients' cloud instead of pure SaaS, with APIs feeding client planning workflows and client data scientists extending models; enabled **2 additional clients** with strict data-residency needs.
- Owned the data platform's API catalog (endpoints, schemas, auth, integration examples) and release communication for app developers and data scientists; the app team onboarded **5 new client dashboards with no extra effort**.
- Chose modular services over a monolith so Fortune 500 clients could deploy selectively, accepting 6 weeks upfront to avoid a 10× rewrite; **passed the flagship client's security review on time** and **onboarded a second client with no refactor**.
- Grew forecasting-platform adoption with client planners through customer discovery (interviews, workflow observation, adoption data) that found and prioritized the top 3 blockers; shipped SHAP explainability first, lifting **adoption from 50% to 70%**.
- Built the multi-tenant data platform with 8 engineers (ingestion, validation, anonymization, lineage, PII blocking), defining its data contracts from SQL analysis (Athena) of client order, shipment, and promotion data; cut **deployment from 3 months to 3 weeks**.
- Launched a generative AI multi-agent system (LLMs, RAG, LangGraph, MCP) that triages exceptions, automates only low-risk, reversible decisions and routes the rest to human-in-the-loop review; shipped through evaluation gates, achieving **70% recommendation acceptance**, cutting reviewer effort from **4 hrs/day to 4 hrs/week** and overstock from **$5M to $2M**.
- Built the ROI case for agentic AI with a working prototype, showing **>70% of recommendations adopted** and winning a 2-month roadmap shift from model accuracy to agents; later cut **agent run cost ~30%** via model routing.

Amazon — 2016 - 2024 (8 years)

Sr. Product Manager-Technical, Amazon Business Financing & Credit — *2022 - 2024*

- Launched Amazon Business' ML financing product via experimentation, a 5% controlled launch, biweekly Agile sprints, and monthly VP-level reviews against an S-team goal; scaled to **50K+ customers** and **$71M in incremental revenue**.
- Defined versioned REST APIs serving fraud decisions at onboarding and real-time credit eligibility at checkout, built on batch underwriting plus transaction-level controls to keep ML inference out of checkout; **pulled impact forward 3 months**.
- Owned credit fraud controls with the fraud and Buyer Risk Prevention teams: set the fraud-detection threshold at 99% precision to limit customer friction for legitimate businesses, backed by a domain blocklist, post-checkout checks, and exposure limits.
- Scaled a global consumer credit product through credit bureau integrations that added **17% data coverage and a 7% approval lift**, an onboarding redesign that **halved abandonment**, and ML-personalized marketing worth **$15M in incremental revenue**.

Sr. Product Manager-Technical, ML Ops Developer Platform — *2020 - 2022*

- Owned vision and roadmap for a SageMaker-based MLOps platform for 30+ risk and credit data scientists, treating onboarding as a product (templates, docs, community); cut **deployment time 40%** and scaled to **100+ production models** with flat headcount.

Product Manager-Technical, Supply Chain Optimization — *2018 - 2020*

- Defined inventory-recommendation APIs on Amazon's Selling Partner APIs so external developers and partners could show sellers recommendations and projected savings; with wider coverage and a Seller Central entry point, lifted **adoption from 1% to 10%**.
- Built MOQ recommendation APIs that gave 20K sellers item-level minimum order thresholds on Seller Central; a controlled experiment found **~60% higher seller adherence** with no conversion loss, saving sellers **$20M in shipping costs**.
- Launched TRACE, a causal decision support product that explained shipping-cost changes across 50+ drivers from 14 teams' systems and recommended the top fix to sellers via Seller Central APIs, driving **$40M of the team's $100M+ in savings**.

Product Manager, Amazon Pricing — *2016 - 2018*

- Launched self-service price-perception insight tools benchmarking Amazon against 800+ retailers in 17 countries; adopted by **40+ global pricing leaders**, with signals feeding the pricing models that set Amazon's prices.

Cognizant Technology Solutions | Designed solutions and pricing for 30+ APAC deals worth **$25M** (**45% win rate**) — *2015 - 2016*

EDUCATION

MBA, Marketing & Operations, IIT Roorkee (2013-15) | B.E., Chemical Engineering, Thapar University (2009-13)
