SUMMARY

Principal product manager with 11+ years shipping AI/ML products at scale: an agentic AI platform in Keystone's AI startup division (**$7.5M ARR**) and ML credit and fraud-risk products at Amazon (**$71M revenue**, **50K+ customers**), aligning C-suite leaders.

EXPERIENCE — 2015 - Present (11 years)

Keystone.ai | *AI division of Keystone, a 20+ year tech and economics advisory firm ($100M PE-backed)*

Principal Product Manager-Technical — *2024 - Present*

- Led 0→1 product strategy and roadmap for an enterprise AI decision platform (ML forecasting and agentic workflows), aligning the CEO and CTO to pivot from consulting to a product-led model and directing 30+ engineers and data scientists; reached **$7.5M ARR** and **$25M in annualized client savings** across 5 Fortune 500 clients.
- Set value-based modular pricing and packaging with Sales, Finance, and the CEO (forecasting, then agents as an add-on), rejecting usage- and savings-based pricing; **2 clients upgraded to agents (+~$500K ACV each)**.
- Launched a multi-agent system (LLMs, RAG, LangGraph, MCP) that triages exceptions and diagnoses root causes, automating only low-risk, reversible actions and routing the rest to human review with evidence; cleared shadow-mode eval gates, reaching **70% recommendation acceptance** and cutting **planner effort 4 hrs/day to 4 hrs/week**.
- Ran customer discovery (planner interviews, workflow observation, adoption data) to find the top 3 adoption blockers, then prioritized fixes, shipping SHAP explainability before agents; lifted **forecast adoption from 50% to 70%**.
- Led data analysis in SQL (Athena), validating grain, keys, join cardinality, and data quality in orders, shipments, and trade-promotion data, turning findings into data contracts for the data platform; cut **deployment from 3 months to 3 weeks**.
- Diagnosed a drop in agent adoption at one client (70% to 50% over 4 weekly cycles) through traces to a missing location signal, then added the data and a guardrail to escalate rather than act on incomplete data; **restored adoption to 70%**.
- Traced repeated assistant errors to undescribed data fields (>60% of diagnostic failures), not the model, and built a data catalog and semantic layer as a platform fix for every client; cut **repeat questions from 50% to 30%**.
- Owned the data platform's API catalog (schemas, auth, integration examples) and release communication for app developers and data scientists; the app team built dashboards for **5 new clients with no extra effort**.

Amazon — 2016 - 2024 (8 years)

Sr. Product Manager-Technical, Amazon Business Financing & Credit — *2022 - 2024*

- Launched Amazon Business' ML financing product via experimentation, a 5% controlled launch, and monthly VP-level reviews against an S-team goal; scaled to **50K+ customers** and **$71M in incremental revenue**.
- Owned the credit fraud controls with the fraud and Buyer Risk Prevention teams: set the detection threshold at 99% precision to limit customer friction for legitimate businesses, with a domain blocklist, post-checkout checks, and exposure limits.
- Designed the checkout credit decision: versioned APIs answered eligibility in real time from batch underwriting plus transaction-level controls, keeping ML inference out of checkout and **pulling impact forward 3 months**.
- Rebuilt SMB underwriting on Amazon behavioral data where thin credit files held approval at 4%, capping exposure by risk tier; raised **SMB approval to 15%** with **no credit losses** after full launch.

Sr. Product Manager-Technical, ML Ops Developer Platform — *2020 - 2022*

- Owned vision and roadmap for a SageMaker-based MLOps platform for 30+ risk and credit data scientists, with governance and monitoring by default; cut **deployment time 40%** and scaled to **100+ production models** with flat headcount.

Product Manager-Technical, Supply Chain Optimization — *2018 - 2020*

- Specced inventory-recommendation APIs on Amazon's Selling Partner APIs so outside developers and partners could show recommendations and projected savings; with wider coverage and a Seller Central entry point, **adoption rose 1% to ~10%**.
- Launched ML recommendation and causal decision support products across thousands of sellers, explaining shipping-cost changes across 50+ drivers from 14 teams' systems; **$100M+ in savings**, including **$40M from causal attribution**.

Product Manager, Amazon Pricing — *2016 - 2018*

- Launched self-service price-perception insight tools benchmarking Amazon against 800+ retailers in 17 countries; adopted by **40+ global pricing leaders**, with signals feeding Amazon's pricing models.

Cognizant Technology Solutions | Designed solutions and pricing for 30+ APAC deals worth **$25M** (**45% win rate**) — *2015 - 2016*

EDUCATION

MBA, Marketing & Operations, IIT Roorkee (2013-15) | B.E., Chemical Engineering, Thapar University (2009-13)
