SUMMARY

Principal product manager with 11+ years shipping AI/ML products at scale. Built an agentic AI platform at Keystone's AI startup to **$7.5M ARR**, after 8 years of ML products at Amazon, including credit and fraud risk (**$71M revenue**, **50K+ customers**).

EXPERIENCE — 2015 - Present (11 years)

Keystone.ai | *AI division of Keystone, a 20+ year tech and economics advisory firm ($100M PE-backed)*

Principal Product Manager-Technical — *2024 - Present*

- Moved Keystone from consulting to product: got the CEO and CTO behind a 0→1 enterprise AI platform for supply-chain decisions, set its strategy and roadmap, and directed 30+ engineers and data scientists; reached **$7.5M ARR** and **$25M a year in client savings** across 5 Fortune 500 clients.
- Priced the platform with Sales, Finance, and the CEO: forecasting as the base subscription and agents as an add-on, instead of usage-based or savings-share pricing; **2 clients upgraded to agents for $500K more a year each**.
- Shipped a multi-agent system that flags forecast problems, finds the cause, and acts alone only when the action is low-risk and reversible; the rest goes to a planner with the evidence. After shadow-mode testing, **70% of recommendations were accepted** and **planner review fell from 4 hours a day to 4 a week**.
- Ran customer discovery, interviewing planners and watching them work to learn why adoption stalled, found three blockers, and prioritized them, starting with model explanations (SHAP); **forecast adoption rose from 50% to 70%**.
- Wrote SQL (Athena) to check the quality of client order, shipment, and promotion data and how it fit together, and turned the findings into data contracts for the data platform; **deployment time fell from 3 months to 3 weeks**.
- When agent adoption at one client fell from 70% to 50% in a month, traced it to a warehouse move the agent didn't know about, then added the location data and a rule to escalate when data is missing; **adoption returned to 70%**.
- Made the case to leadership and investors for running the platform in each client's own cloud, with APIs that fed client planning tools and let client data scientists add model features; **won 2 clients whose data-residency rules ruled out SaaS**.
- Built the data platform's API catalog (endpoints, schemas, auth, integration examples) and announced new endpoints to app developers and data scientists; **the app team built dashboards for 5 new clients with no extra work**.

Amazon — 2016 - 2024 (8 years)

Sr. Product Manager-Technical, Amazon Business Financing & Credit — *2022 - 2024*

- Launched a financing product for Amazon Business customers with a 5% test, reported monthly to VP-level leadership on an S-team goal, and scaled it to **50K+ customers** and **$71M in incremental revenue**.
- Decided how the credit product used the fraud team's detection model: blocked only high-confidence fraud (99% precision) to limit friction for legitimate customers, and relied on a domain blocklist, post-checkout checks, and credit limits to catch the rest.
- Specified versioned REST APIs that returned fraud decisions at signup and real-time credit eligibility at checkout. Scoring customers in weekly batches kept model inference out of checkout and **got the product out 3 months sooner**.
- Rebuilt small-business underwriting on Amazon purchase and repayment history, since thin credit files had held approvals at 4%, and capped exposure by risk tier; **SMB approvals rose to 15% with no credit losses** after full launch.

Sr. Product Manager-Technical, ML Ops Developer Platform — *2020 - 2022*

- Ran the roadmap for the SageMaker-based platform 30+ risk and credit data scientists used to ship models, with governance and monitoring built in; **deployment time fell 40%** and **production models grew to 100+** with no new headcount.

Product Manager-Technical, Supply Chain Optimization — *2018 - 2020*

- Specified inventory-recommendation APIs on Amazon's Selling Partner APIs so outside developers and partners could show sellers recommendations and projected savings. With wider coverage and a Seller Central link, **adoption rose from 1% to 10%**.
- Built ML recommendation and cost-attribution products, delivered through Seller Central and APIs, that explained shipping-cost changes across 50+ drivers owned by 14 teams; **$100M+ in savings**, including **$40M from cost attribution**.

Product Manager, Amazon Pricing — *2016 - 2018*

- Built self-service tools comparing Amazon's prices with 800+ retailers in 17 countries; **used by 40+ pricing leaders**, and the signals fed Amazon's pricing models.

Cognizant Technology Solutions | Designed solutions and pricing for 30+ APAC deals worth **$25M** (**45% win rate**) — *2015 - 2016*

EDUCATION

MBA, Marketing & Operations, IIT Roorkee (2013-15) | B.E., Chemical Engineering, Thapar University (2009-13)
