Principal Product Manager – Enterprise Agentic AI, Decision Automation & AI Platforms

SUMMARY

Principal technical product manager with 11+ years building AI/ML and agentic products for high-stakes financial and operational workflows at Amazon and Keystone.ai. Owns AI-first product strategy from customer discovery through evaluation, human-in-the-loop rollout, production monitoring, and scaled adoption: $71M incremental revenue from ML credit decisioning, $100M+ savings from ML decision products, and a 0→1 agentic platform scaled to 5 enterprises. Builds trust into AI through data governance, explainability, auditable calculations, and launch gates.

EXPERIENCE

Principal Product Manager – Technical, Keystone.ai **2024 – 2026**

Enterprise agentic AI company; led its pivot from consulting to product ($5M ARR)

- **AI-First Strategy & Operating Model:** Led 0→1 vision, strategy, and roadmap for Deep Enterprise, an agentic AI platform turning complex enterprise decisions into reusable workflows; drove the consulting-to-product pivot, improved forecast WAPE 21%, and delivered $25M in annualized client savings across 5 enterprises.
- **Agentic Workflows & Human-in-the-Loop:** Launched a multi-agent system for exception detection, tool-based root-cause diagnosis, RAG-grounded recommendations, human approval, and risk-tiered autonomy; cut planner effort from 4 hrs/day to 4 hrs/week.
- **AI Evaluation & Production Readiness:** Built evaluation systems for task correctness, groundedness, retrieval quality, tool compliance, action safety, and regression testing using automated checks, LLM-as-judge, and expert review; set shadow-mode launch gates (>70% exception recall and acceptance) and monitored adoption, edits, and rejection reasons in production.
- **Explainability & Adoption:** Translated planner interviews and usage data into SHAP-based explainability and a revised retraining cadence, raising forecast adoption from 50% to 60%, and to ~70% after the agent launch.
- **Data Platform & Governance:** Built the enterprise data platform (ingestion, validation, lineage, APIs, model-ready contracts) and a runtime data catalog with sensitivity tiers and PII blocking for agent grounding; cut deployment from 3 months to 3 weeks and raised recommendation acceptance from 50% to 80%.
- **Financial Workflow Automation:** Led REI-Agent, a multi-agent assistant for natural-language variance analysis backed by governed metrics and auditable calculations, and HAT-AI, which saved 120 hrs/week across 15 finance products.

Sr. Product Manager – Technical, Amazon **2016 – 2024**

- **ML Credit Decisioning at Scale:** Launched and scaled an ML-based financing product to 50K+ customers and $71M incremental revenue; owned discovery, experimentation, rollout, and performance across growth, risk, and economic outcomes.
- **Credit Product Growth:** Scaled a global consumer credit product through ML-personalized marketing ($15M incremental revenue), credit bureau integrations (+17% data coverage, +7% approval lift), and an onboarding redesign (50% lower abandonment).
- **MLOps Platform & Model Governance:** Owned vision, roadmap, and adoption for a SageMaker-based MLOps platform enabling 30+ scientists to deploy, evaluate, and monitor 100+ production models; productized lineage, privacy compliance, and model governance, cutting deployment time 40% and doubling model volume with no added headcount.
- **Causal Decision Support:** Launched a causal-attribution product unifying operational and financial data across 50+ shipping-cost drivers into actionable recommendations, driving $40M in savings, part of $100M+ across three ML decision products.
- **ML Recommendations:** Built an ML product optimizing item-level purchase thresholds for 20K merchants and 120K offers; ~60% higher adherence and lower shipping cost with no measurable conversion decline before full rollout.

Business Analyst, Cognizant Technology Solutions **2015 – 2016**

- Designed infrastructure service solutions and pricing with solution architects for $25M in Asia Pacific deals.

SKILLS

- **AI/ML:** LLMs, RAG, agentic workflows, multi-agent systems, predictive models, natural-language interfaces, LLM-as-judge, human-in-the-loop, model routing
- **Responsible AI & Data:** AI evaluation, explainability (SHAP), data governance, lineage, PII controls, privacy compliance, production monitoring
- **Product:** product vision and strategy, roadmap, operating model, customer discovery, experimentation, ROI cases, business, model, and adoption metrics
- **Platforms:** AWS (Bedrock, SageMaker, Step Functions, Lambda, Glue), Qdrant, FastAPI

EDUCATION

MBA, Marketing and Operations, Indian Institute of Technology (IIT) Roorkee | B.E., Chemical Engineering, Thapar University
