SUMMARY

Principal product manager with 11+ years shipping AI at scale: built an agentic enterprise AI platform 0-to-1 for Fortune 500 clients in Keystone's AI startup division and ML products at Amazon ($71M revenue, 100+ models), influencing C-suite leaders.

EXPERIENCE

Keystone.ai | Seattle, WA | 2024 – Present

Principal Product Manager – Technical (AI startup division; Fortune 500 clients)

- Owned AI-first product strategy, roadmap, and operating model for an enterprise AI platform that automates forecasting and planning decisions with agentic workflows and predictive models; influenced the CEO/CTO to pivot from consulting to a product-led model, reaching $5M ARR and $25M in annualized client savings across 5 Fortune 500 clients.
- Defined the business model with tiered subscription pricing and packaging; persuaded leadership and investors to deploy as a managed service in client environments instead of pure SaaS, trading 1 extra month of deployment for 2 clients with strict data-residency requirements.
- Launched a generative AI multi-agent system for intelligent automation (LLMs, RAG, LangGraph, MCP) that triages exceptions, acts alone only on low-risk, reversible actions, and routes the rest to human-in-the-loop review; 70% of recommendations accepted, reviewer effort cut from 4 hrs/day to 4 hrs/week, and overstock cut from $5M to $2M.
- Grew forecast adoption from 50% to 70% across client planning teams: ran customer discovery (planner interviews, workflow observation, adoption data analysis) to find the top 3 blockers, shipped SHAP explainability first and agent support second, and reviewed results bi-weekly with client leadership.
- Led cross-functional delivery with 30+ engineers and data scientists through evaluation, phased rollout, and production monitoring at the flagship Fortune 500 client, beating the incumbent tool's forecast accuracy by 21–26% (WAPE) with 85% of SKUs in the first phase; mentored 4–5 junior product managers and interns, and led dotted-line PMs.
- Built the multi-tenant data platform and data governance layer with 7–8 engineers (ingestion, validation, anonymization, lineage, data contracts, PII blocking), cutting deployment from 3 months to 3 weeks; its NLP semantic layer cut users re-asking the AI assistant from 50% to 30%.
- Built the ROI case for agentic AI: a working prototype (>70% of recommendations adopted) won a 2-month roadmap shift from model accuracy to agents, and model routing cut agent run cost ~30% with no loss in quality.

Amazon | Seattle, WA | 2016 – 2024

Sr. Product Manager – Technical

Amazon Business Financing & Credit (2022 – 2024)

- Launched an ML financing product on Amazon Business and scaled it to 50K+ customers and $71M in incremental revenue through experimentation, a 5% controlled launch, OKRs, and biweekly Agile sprints; presented monthly to VP-level executives against an S-team goal.
- Raised SMB credit approval from 4% to 15% with no credit losses after full launch by fixing a data bias against thin-file small businesses, using Amazon behavioral data and business-level features only.
- Built responsible AI into credit and fraud models in a regulated lending environment: met regulatory requirements in parallel review with Amazon's financial risk teams, explained every decline with adverse-action reason codes and SHAP, and set the fraud threshold at 99% precision so legitimate customers weren't blocked.

Machine Learning Platform (2020 – 2022)

- Owned vision and roadmap for a SageMaker-based MLOps platform serving 30+ scientists and 100+ production models; cut deployment time 40%, doubled production models with no added headcount, and made production monitoring the default so every model stayed audit-ready.
- Protected sensitive financial data in ML: launched access controls, encryption, and anonymization, and defined how privacy law applies to ML data with privacy bar raisers and Legal; adopted as policy across Amazon Payments (~20 teams), saving 5 science FTE per year.

Supply Chain ML Recommendations (2018 – 2020)

- Built ML recommendation and causal decision support products used by thousands of sellers, delivering $100M+ in savings; aligned 20+ senior stakeholders and persuaded the VP of Amazon FBA to let the product recommend inventory placement; TRACE attributed cost changes across 50+ drivers and 14 teams and recommended the top fix, driving $40M.

Cognizant Technology Solutions | Business Analyst | 2015 – 2016

Designed service solutions and pricing for $25M in APAC deals; 30+ deals at a 45% win rate.

EDUCATION

MBA, Marketing & Operations, IIT Roorkee | B.E., Chemical Engineering, Thapar University
