SUMMARY

Principal product manager with 11+ years shipping AI/ML platforms at scale. Built the data catalog and semantic layer that grounded enterprise AI agents at Keystone (**$7.5M ARR**) and a governed self-service ML platform at Amazon (**100+ production models**).

EXPERIENCE — 2015 - Present (11 years)

Keystone.ai | *AI division of Keystone, a 20+ year tech and economics advisory firm (450+ employees, PE-backed)*
Principal Product Manager-Technical — *2024 - Present*

- Led 0→1 product strategy and roadmap for an enterprise AI supply chain platform, persuading C-suite executives to pivot from consulting to a product-led model and directing 30+ engineers and data scientists; reached **$7.5M ARR** and **$25M in annualized client savings** across 5 Fortune 500 clients.
- Traced repeated user questions and agent errors to missing field descriptions (over 60% of diagnostic failures), not the model. Built a runtime data catalog and semantic layer with trust tiers, PII-blocking sensitivity tiers, a synonym-to-concept layer, and lineage; **re-asking fell from 50% to 30%** and **field-related failures from 60% to 40%**.
- Set a three-tier trust policy for AI-generated field descriptions (auto-publish above 0.85, review at 0.70–0.84, blocked below) and made CI/CD fail on undescribed fields; **coverage rose from 60% to 80%** and **95% of auto-published descriptions were approved**.
- Launched a multi-agent system that flags forecast problems, finds the cause and recommends a fix, automating only low-risk, reversible actions and routing the rest to human approval; shadow mode and evaluation gates led to 70% recommendation acceptance and **planner effort of 4 hrs/day to 4 hrs/week**.
- Built a multi-tenant data platform with 8 engineers (ingestion, validation, lineage, data contracts, PII blocking). Kept client data in its native schema and standardized only the contract models consume, cutting **deployment from 3 months to 3 weeks**.
- Wrote the platform's API catalog (field definitions, client-specific mappings, working examples) and set a rule that no endpoint ships without them; **5 client dashboards onboarded with no extra platform support** and **platform-team time on app-team requests fell from ~50% to ~10%**.

Amazon — 2016 - 2024 (8 years)

Sr. Product Manager-Technical, ML Ops Developer Platform

- Owned vision and roadmap for a self-service internal developer platform on AWS SageMaker used by 30+ risk and credit data scientists; secured 8+ engineering HC a year and cut **deployment time 40%**.
- Replaced ~1.5 months of engineering setup per model with self-service provisioning and pipelines: users choose compute type and capacity, and runs trigger automatically on certified data; scaled to **100+ production models with flat headcount**.
- Turned team onboarding into a product, investing in documentation and community support instead of asking each new team for 1 HC; cut **maintenance from 5 to 3 weeks per team** and **onboarded 5 new teams**.
- Made threshold-based monitoring and alerting the platform default to meet Federal Reserve model-risk rules (SR 11-7), expanding coverage from **30 to all 100 production models** and avoiding **~400 science-weeks** of setup.
- Made privacy compliance a platform default under EU and US privacy law (deletion, data return, retention) with Amazon's privacy and legal teams; adopted across **~20 Amazon Payments teams**, saving **5 science FTE per year**.

Sr. Product Manager-Technical, Amazon Business Financing & Credit

- Launched Amazon Business' ML financing product via experimentation, a 5% controlled launch, and monthly VP-level reviews against an S-team goal; scaled to **50K+ customers** and **$71M in incremental revenue**.

Product Manager-Technical, Supply Chain Optimization

- Launched TRACE, a causal cost-attribution product that explained shipping-cost changes across 50+ drivers from 14 teams' systems and recommended the top fix to sellers, driving **$40M** of the team's **$100M+ in savings**.

Product Manager, Amazon Pricing

- Launched self-service price-perception insight tools benchmarking Amazon against 800+ retailers in 17 countries; adopted by **40+ global pricing leaders**, with signals feeding the pricing models that set Amazon's prices.

Cognizant Technology Solutions | Designed infrastructure solutions for 30+ APAC deals worth **$25M** (**45% win rate**) *2015 - 2016*

EDUCATION

MBA, Marketing & Operations, IIT Roorkee (2013-15) | B.E., Chemical Engineering, Thapar University (2009-13)
