SUMMARY

Principal technical product manager with 11+ years shipping AI/ML platforms at scale: led an enterprise agentic AI platform at Keystone (**$7.5M ARR**) and an ML platform for 30+ scientists at Amazon, with security and compliance built in.

EXPERIENCE — 2015 - Present (11 years)

Keystone.ai | *AI division of Keystone, a 20+ year tech and economics advisory firm (450+ employees, PE-backed)*

Principal Product Manager-Technical — *2024 - Present*

- Led strategy and roadmap for Deep Enterprise, Keystone's enterprise AI supply chain platform (forecasting models and agentic workflows), and helped move the company from consulting to a product-led model. The platform reached **$7.5M ARR** and **$25M in annualized client savings** across 5 Fortune 500 clients.
- Passed the flagship client's security review on time by deploying as a managed service in the client's cloud (AWS and Azure, infrastructure-as-code) instead of pure SaaS, which also **won 2 additional clients** with strict data-residency needs.
- Launched a multi-agent system (LLMs, RAG, LangGraph, MCP) that flags forecast problems, finds the cause and routes recommendations to human review. Gated releases on evaluations of groundedness, tool compliance and action safety, and blocked direct forecast changes. It hit 70% acceptance and cut **planner effort from 4 hrs/day to 4 hrs/week**.
- Lifted RAG **retrieval precision from 0.58 to 0.81** by replacing a static pipeline with incremental ingestion, per-source chunking, domain-adapted embeddings and quality gates, tested weekly with the client.
- Cut **agent run cost ~30%** by tracking token costs and testing models and prompts on cost, latency, quality and adoption, then routing simple cases to low-cost models and ambiguous ones to stronger models.
- Built the multi-tenant data platform and governance layer with 8 engineers (anonymization, lineage, data contracts, PII blocking), cutting **deployment from 3 months to 3 weeks**.
- Ran production operations with client IT for the managed service: added data-completeness checks, proactive monitoring, automated alerts, retraining controls and an executive escalation forum after late data and unstable forecasts hit planners.
- Raised forecast adoption **from 50% to 70%** across client planners by interviewing them, observing their workflows and analyzing usage data to find the top 3 blockers. Shipped SHAP explainability, then agent support, and led change management.

Amazon — 2016 - 2024 (8 years)

Sr. Product Manager-Technical, Amazon Business Financing & Credit — *2022 - 2024*

- Wrote the vision to converge 6 credit assessment services, 3 analyst tools and the rule libraries for small-business lending, evaluated 3 vendors for Central Rules Engine capabilities, then built in-house and designed its MVP.
- Applied responsible AI to credit and fraud models in regulated lending by explaining every declined application with adverse-action reason codes and setting the fraud threshold at 99% precision, clearing regulatory review with Amazon's financial risk teams without blocking legitimate businesses.

Sr. Product Manager-Technical, ML Ops Developer Platform — *2020 - 2022*

- Owned vision and roadmap for an AWS SageMaker-based MLOps platform serving 30+ data scientists; cut deployment time **40%**, scaled to **100+ production models** with no added headcount, and made production monitoring the default.
- Built model governance for regulated lending (SR 11-7): standardized monitoring with pre-defined thresholds and owner alerts, change-tracked versioning and an audit-ready model inventory across **100+ high-risk models**.
- Led GDPR and regulatory compliance for the platform by making privacy a default: launched access controls, encryption and anonymization, and set privacy rules for ML data with Amazon's privacy and legal teams. Adopted across ~20 Amazon Payments teams, saving **5 science FTE per year**.

Product Manager-Technical, Supply Chain Optimization — *2018 - 2020*

- Built ML recommendation products for inventory, pricing, and shipping decisions across thousands of sellers, aligning 20+ senior stakeholders and persuading the VP of Amazon FBA to let the product recommend inventory placement; **$100M+ in savings**.

Product Manager, Amazon Pricing — *2016 - 2018*

- Launched self-service price-perception insight tools benchmarking Amazon against 800+ retailers in 17 countries; adopted by **40+ global pricing leaders**, with signals feeding the pricing models that set Amazon's prices.

Cognizant Technology Solutions | Designed pricing for 30+ APAC infrastructure deals worth **$25M (45% win rate)** — 2015 - 2016

EDUCATION

MBA, Marketing & Operations, IIT Roorkee (2013-15) | B.E., Chemical Engineering, Thapar University (2009-13)
