SUMMARY

Principal product manager with 11+ years shipping AI/ML products at scale: led an agentic AI platform for Fortune 500 enterprises in Keystone's AI startup division ($5M ARR) and ML products at Amazon ($71M revenue, 50K+ customers), aligning C-suite leaders.

EXPERIENCE — 2015 - Present (11 years)

Keystone.ai | *AI division of Keystone, a 20+ year tech and economics advisory firm*

Principal Product Manager-Technical — *2024 - Present*

- Led AI product strategy, roadmap, and operating model for an enterprise AI supply chain platform (forecasting models and agentic workflows), influencing C-suite executives to pivot the company from consulting to a product-led model; reached $5M ARR, $25M in annualized client savings across 5 Fortune 500 clients, and 21–26% better forecast accuracy than the incumbent tool.
- Defined the business model, tiered subscription pricing, and go-to-market; persuaded leadership and investors to deploy as a managed service in clients' cloud instead of pure SaaS, enabling 2 additional clients with strict data-residency needs.
- Launched a generative AI multi-agent system for intelligent automation (LLMs, RAG, LangGraph, MCP) that triages exceptions, automates low-risk decisions and routes the rest to human-in-the-loop review; shipped through evaluation gates, achieving 70% recommendation acceptance, cutting reviewer effort from 4 hrs/day to 4 hrs/week and overstock from $5M to $2M.
- Built the ROI case for agentic AI with a working prototype, showing >70% of recommendations adopted and winning a 2-month roadmap shift from model accuracy to agents; later cut agent run cost ~30% via model routing.
- Drove adoption of the forecasting platform across client planning teams by running customer discovery (planner interviews, workflow observation, adoption data analysis) to find the top 3 blockers; shipped SHAP explainability before agent support, lifting adoption from 50% to 70%.
- Delivered platform MVP in 3 months with 30+ engineers and data scientists; organized 3 parallel product lanes with MVP milestones, cross-functional reviews, bi-weekly client leadership reviews, and phased rollouts; also mentored 3 dotted-line PMs.
- Built the multi-tenant data platform and data governance layer with 8 engineers (ingestion, validation, anonymization, lineage, data contracts, PII blocking), cutting deployment from 3 months to 3 weeks; its NLP semantic layer cut repeat questions to the AI assistant from 50% to 30%.

Amazon — 2016 - 2024 (8 years)

Sr. Product Manager-Technical, Amazon Business Financing & Credit — *2022 - 2024*

- Launched Amazon Business' ML financing product via experimentation, a 5% controlled launch, biweekly Agile sprints, and monthly VP-level reviews against an S-team goal, scaling to 50K+ customers and $71M in incremental revenue.
- Corrected a data bias in SMB credit underwriting, where thin credit files held small-business approval at 4%; rebuilt the model on Amazon behavioral data, raising SMB approval to 15% with no credit losses after full launch.
- Applied responsible AI to credit and fraud models in regulated lending by explaining every declined application with adverse-action reason codes and setting the fraud threshold at 99% precision, clearing regulatory review with Amazon's financial risk teams without blocking legitimate businesses.

Sr. Product Manager-Technical, ML Ops Developer Platform — *2020 - 2022*

- Owned vision and roadmap for an AWS SageMaker-based MLOps platform serving 30+ data scientists; cut deployment time 40%, scaled to 100+ production models with no added headcount, and made production monitoring the default.
- Made privacy a platform default: launched access controls, encryption, and anonymization, and defined privacy rules for ML data with Amazon's privacy and legal teams; adopted across ~20 Amazon Payments teams, saving 5 science FTE per year.

Product Manager-Technical, Supply Chain Optimization — *2018 - 2020*

- Built ML recommendation products for inventory, pricing, and shipping decisions across thousands of sellers, aligning 20+ senior stakeholders and persuading the VP of Amazon FBA to let the product recommend inventory placement; $100M+ in savings.
- Launched TRACE, a causal decision support product that explained shipping-cost changes across 50+ drivers from 14 teams' systems and recommended the top fix to sellers, driving $40M in savings.

Product Manager, Amazon Pricing — *2016 - 2018*

- Launched self-service price-perception insight tools benchmarking Amazon against 800+ retailers in 17 countries; adopted by 40+ global pricing leaders, with signals feeding the pricing models that set Amazon's prices.

Cognizant Technology Solutions | Designed solutions and pricing for 30+ APAC deals worth $25M (45% win rate) — *2015 - 2016*

EDUCATION

MBA, Marketing & Operations, IIT Roorkee (2013-15) | B.E., Chemical Engineering, Thapar University (2009-13)
