SUMMARY

Principal product manager with 11+ years building AI, data and ML platforms. Led an agentic AI and data platform at Keystone's AI startup (**$7.5M ARR**); at Amazon, ML platforms and products delivered **$100M+ in savings** and **$71M in revenue**.

EXPERIENCE — 2015 - Present (11 years)

Keystone.ai | *AI division of Keystone, a 20+ year tech and economics advisory firm (450+ employees, PE-backed)*

Principal Product Manager-Technical — *2024 - Present*

- Led 0→1 product strategy and roadmap for an enterprise AI platform, moving the company from consulting to a product-led model with the CEO and CTO and setting direction for 30+ engineers and data scientists; reached **$7.5M ARR** and **$25M in annualized client savings** across 5 Fortune 500 clients.
- Built a multi-tenant data platform (ingestion, validation, lineage, data contracts, APIs), plus an AI-generated data catalog and semantic layer to ground agents; cut **deployment from 3 months to 3 weeks** and **clarification rate from 50% to 30%**.
- Deployed the platform in the flagship Fortune 500 client's Databricks environment, with automated data-quality checks, weekly retraining and evaluation against the incumbent tool; improved **forecast error (WAPE) up to 26%**.
- Proved the case for agents with a prototype (>70% of recommendations adopted), shifting 2 months of roadmap from model accuracy work; launched a multi-agent system with RAG, tiered autonomy and human approval, reaching **70% acceptance** and cutting **planner effort from 4 hrs/day to 4 hrs/week**.
- Built agent evaluation infrastructure: expert reference cases, a harness comparing prompt, tool and retrieval versions, LLM-as-judge and production monitoring; traced one client's adoption drop to a data gap and **restored adoption from 50% to 70%**.
- Fixed pilot unit economics, where model cost exceeded the cost of manual work, by routing simple cases to low-cost models and ambiguous ones to stronger models; cut **agent run cost ~30%** with lower latency and unchanged quality.
- Launched an internal AI assistant that automated roadmap reporting, leadership newsletters and knowledge search across 15 finance products; **used by 30 PMs, saving 120 hours a week**.

Amazon — 2016 - 2024 (8 years)

Sr. Product Manager-Technical, ML Ops Developer Platform

- Owned vision and roadmap for a self-service ML platform on AWS SageMaker used by 30+ risk and credit data scientists; secured 8+ engineering HC a year and cut **deployment time 40%**.
- Replaced ~1.5 months of engineering setup per model with self-service pipelines that trigger automatically when certified data lands; scaled to **100+ production models with flat headcount**.
- Competed with an easier-to-adopt internal platform by treating onboarding as a product (documentation, community support) instead of asking each team for 1 HC; cut **maintenance from 5 to 3 weeks per team** and **onboarded 5 new teams**.
- Made threshold-based monitoring and alerting the platform default to meet Federal Reserve model-risk rules (SR 11-7), expanding coverage from **30 to all 100 production models** and avoiding **~400 science-weeks** of setup.
- Made privacy compliance a platform default under EU and US privacy law (deletion, data return, retention) with Amazon's privacy and legal teams; adopted across **~20 Amazon Payments teams**, saving **5 science FTE per year**.

Sr. Product Manager-Technical, Amazon Business Financing & Credit

- Launched Amazon Business' 0→1 ML financing product via experimentation, a 5% controlled launch and monthly VP-level reviews against an S-team goal; scaled to **50K+ customers** and **$71M in incremental revenue**.
- Scaled a global consumer credit product with ML-personalized marketing, credit bureau integrations and an onboarding redesign; added **$15M in incremental revenue**, a **7% approval lift** and **50% lower onboarding abandonment**.
- Wrote the strategy and PRFAQ for a business fraud score that assessed every business from sign-up to first order as a shared risk signal; avoided **$18M in fraud losses** and was **adopted by 6 teams**.

Product Manager-Technical, Supply Chain Optimization

- Scaled ML recommendation and causal-attribution products for inventory placement, order minimums and shipping cost, served via Seller Central and partner APIs; delivered **$100M+ in savings**, including **$40M** from shipping-cost attribution.

Product Manager, Amazon Pricing

- Launched price-perception tools benchmarking Amazon vs. 800+ retailers in 17 countries, used by **40+ global pricing leaders**.

Cognizant Technology Solutions | Designed infrastructure solutions for 30+ APAC deals worth **$25M** (**45% win rate**) *2015 - 2016*

EDUCATION

MBA, Marketing & Operations, IIT Roorkee (2013-15) | B.E., Chemical Engineering, Thapar University (2009-13)
