SUMMARY

Principal product manager with 11+ years shipping platforms and AI/ML products at scale. Led an agentic AI platform at Keystone's AI startup (**$7.5M ARR**); a self-service ML platform (**100+ production models**) and credit products (**$71M revenue**) at Amazon.

EXPERIENCE — 2015 - Present (11 years)

Keystone.ai | *AI division of Keystone, a 20+ year tech and economics advisory firm (450+ employees, PE-backed)*

Principal Product Manager-Technical — *2024 - Present*

- Led 0→1 product strategy and roadmap for an enterprise AI supply chain platform, persuading C-suite executives to pivot from consulting to a product-led model and directing 30+ engineers and data scientists; reached **$7.5M ARR** and **$25M in annualized client savings** across 5 Fortune 500 clients.
- Persuaded leadership and investors to deploy as a managed service in clients' cloud instead of SaaS, productizing multi-cloud deployment with infrastructure-as-code on AWS and Azure; onboarded **2 additional clients with strict data-residency needs**.
- Chose modular services over a monolith for reliability isolation and selective deployment, showing 6 extra weeks cost less than a 10× rewrite later; passed the flagship client's security review on time and **onboarded a second client with no refactor**.
- Launched a multi-agent system that flags forecast problems, diagnoses the root cause and recommends a fix, automating only low-risk, reversible actions and routing the rest to human approval; shipped through shadow mode and evaluation gates to **70% recommendation acceptance**, cutting reviewer effort from **4 hrs/day to 4 hrs/week**.
- Diagnosed an agent adoption drop at one client (70% to 50% over 4 weekly cycles), tracing it to a warehouse move missing from the agent's data; added the dataset and an escalate-on-missing-data guardrail, **restoring adoption to 70%**.
- Fixed pilot unit economics, where model cost exceeded the cost of manual work, by routing simple cases to low-cost models and ambiguous ones to stronger models; cut **agent run cost ~30%** with lower latency and unchanged quality.
- Built a multi-tenant data platform with 8 engineers (ingestion, validation, lineage, data contracts, PII blocking), cutting deployment from **3 months to 3 weeks**.

Amazon — 2016 - 2024 (8 years)

Sr. Product Manager-Technical, ML Ops Developer Platform

- Owned vision and roadmap for a self-service internal developer platform on AWS SageMaker used by 30+ risk and credit data scientists; secured 8+ engineering HC a year and cut **deployment time 40%**.
- Replaced ~1.5 months of engineering setup per model with self-service provisioning and pipelines: users choose compute type and capacity, and runs trigger automatically on certified data; scaled to **100+ production models with flat headcount**.
- Automated CI/CD so every mainline commit builds a versioned container image with identical dev and prod dependencies, removing a week of engineering work per model and **saving ~2 engineering HC over 2 years**.
- Turned team onboarding into a product, investing in documentation and community support instead of asking each new team for 1 HC; cut **maintenance from 5 to 3 weeks per team** and **onboarded 5 new teams**.
- Made threshold-based monitoring and alerting the platform default to meet Federal Reserve model-risk rules (SR 11-7), expanding coverage from **30 to all 100 production models** and avoiding **~400 science-weeks** of setup.
- Made privacy compliance a platform default under EU and US privacy law (deletion, data return, retention) with Amazon's privacy and legal teams; adopted across **~20 Amazon Payments teams**, saving **5 science FTE per year**.

Sr. Product Manager-Technical, Amazon Business Financing & Credit

- Launched Amazon Business' ML financing product via experimentation, a 5% controlled launch, and monthly VP-level reviews against an S-team goal; scaled to **50K+ customers** and **$71M in incremental revenue**.
- Integrated the fraud score, domain risk signals, and checkout controls into SMB credit in a regulated lending business, setting the fraud threshold at 99% precision to protect legitimate businesses; **fraud loss rate fell 15%**.

Product Manager-Technical, Supply Chain Optimization

- Launched TRACE, a causal cost-attribution product that explained shipping-cost changes across 50+ drivers from 14 teams' systems and recommended the top fix to sellers, driving **$40M** of the team's **$100M+ in savings**.

Product Manager, Amazon Pricing

- Launched self-service price-perception insight tools benchmarking Amazon against 800+ retailers in 17 countries; adopted by **40+ global pricing leaders**, with signals feeding the pricing models that set Amazon's prices.

Cognizant Technology Solutions | Designed infrastructure solutions for 30+ APAC deals worth **$25M** (**45% win rate**) *2015 - 2016*

EDUCATION

MBA, Marketing & Operations, IIT Roorkee (2013-15) | B.E., Chemical Engineering, Thapar University (2009-13)
