SUMMARY

Principal product manager with 11+ years shipping AI and machine learning (ML) products at scale: an agentic AI platform in Keystone's AI startup (**$7.5M ARR**) and ML products at Amazon, including credit and fraud risk (**$71M revenue**, **50K+ customers**).

EXPERIENCE — 2015 - Present (11 years)

Keystone.ai, *AI division of Keystone, a 20+ year tech and economics advisory firm (450+ employees, PE-backed)*

Principal Product Manager-Technical — *2024 - Present*

- Led 0→1 product strategy, roadmap, and operating model for an enterprise AI supply chain platform, influencing C-suite executives to pivot from consulting to a product-led model and directing a cross-functional team of 30+ engineers and data scientists; reached **$7.5M ARR** and **$25M in annualized client savings** across 5 Fortune 500 clients.
- Defined the business model, value-based modular pricing, and go-to-market with Sales, Finance, and the CEO; ran customer demos, proof-of-concept scoping and pricing decisions with sales leaders; **2 clients upgraded to agents (+$500K ACV each)**.
- Persuaded leadership and investors to deploy as a managed service in clients' cloud instead of pure SaaS, with APIs feeding client planning workflows; enabled **2 additional clients** with strict data-residency needs.
- Launched a multi-agent system (LLMs, RAG, LangGraph, MCP) that triages exceptions, automates only low-risk, reversible decisions and routes the rest to human-in-the-loop review; shipped through evaluation gates, achieving **>70% recommendation acceptance**, cutting reviewer effort from **4 hrs/day to 4 hrs/week** and overstock from **$5M to $2M**.
- Proved the case for agentic AI with a working prototype (>70% of recommendations adopted), reprioritizing 2 months of roadmap from model accuracy to agents; adoption rose **~10 points** after launch.
- Ran customer discovery (planner interviews, workflow observation, adoption data) to identify and prioritize top blockers impacting adoption of supply chain platform, lifting **adoption from 50% to 70%**.
- Built a multi-tenant data platform with 8 engineers, defining its data contracts from SQL analysis (Athena) of client order, shipment, and promotion data; cut **deployment from 3 months to 3 weeks**.
- Shipped a customer-demo event-stream capability in 2–3 weeks; the prospect became a paying customer.
- Owned the data platform's API catalog (endpoints, schemas, auth, integration examples) and release communication for app developers; the app team onboarded **5 new client dashboards with no extra effort**.

Amazon — *2016 - 2024 (8 years)*

Sr. Product Manager-Technical, Amazon Business Financing & Credit — *2022 - 2024*

- Launched Amazon Business' ML financing product via experimentation, 5% controlled launch, biweekly Agile sprints, and monthly VP-level reviews against an S-team goal; scaled to **50K+ customers** and **$71M in incremental revenue**.
- Owned end-to-end fraud strategy for Amazon Business' Pay by Invoice credit, writing the PRFAQ for a fraud score that assessed every business from sign-up to first order; **avoided $18M in fraud losses and was adopted by 6 teams.**
- Investigated fraudsters who passed sign-up checks but behaved like bots, then added behavioral and IP signals and an IP blocklist; **caught fraud 10 days earlier**, **lifted upfront detection 14–15% and flagged $2.7M in fraudulent credit lines.**
- Set fraud score threshold at 99% precision after a 3-week shadow run with no false suspensions, layered with Buyer Risk Prevention's checkout controls, a domain blocklist and exposure limits to protect legitimate businesses.
- Corrected a data bias in SMB credit underwriting, where thin credit files held small-business approval at 4%; rebuilt the model on Amazon behavioral data, raising **SMB approval to 15%** with **no credit losses** after full launch.
- Chose batch over real-time credit decisions to **launch 3 months earlier**, managing risk with exposure caps and category limits; defined the APIs for fraud checks at signup and credit eligibility at checkout.

Sr. Product Manager-Technical, ML Ops Developer Platform — *2020 - 2022*

- Owned vision and roadmap for a SageMaker-based MLOps platform serving 30+ risk and credit data scientists; cut **deployment time 40%**, scaled to **100+ production models** with flat headcount, and made production monitoring the default.

Product Manager-Technical, Supply Chain Optimization — *2018 - 2020*

- Built SPORT, an ML inventory-recommendation product, and exposed it through Selling Partner APIs so external developers could show sellers recommendations and projected savings; **adoption rose from 1% to 10%**.
- Launched TRACE, a causal decision support product that explained shipping-cost changes across 50+ drivers from 14 teams' systems and recommended the top fix to sellers via Seller Central APIs, driving **$40M of the team's $100M+ in savings**.

Product Manager, Amazon Pricing — *2016 - 2018*

- Launched self-service price-perception insight tools benchmarking Amazon against 800+ retailers in 17 countries; adopted by **40+ global pricing leaders**, with signals feeding the pricing models that set Amazon's prices.

Cognizant Technology Solutions | Designed solutions and pricing for 30+ APAC deals worth $25M (45% win rate) — *2015 - 2016*

EDUCATION

MBA, Marketing & Operations, IIT Roorkee (2013-15) | B.E., Chemical Engineering, Thapar University (2009-13)
