SUMMARY

Principal product manager with 11+ years shipping AI/ML products at scale, hands-on with builders and early adopters. Led an agentic AI platform at Keystone's AI startup (**$7.5M ARR**) and a self-service ML platform at Amazon (**100+ production models**).

EXPERIENCE — 2015 - Present (11 years)

Keystone.ai | *AI division of Keystone, a 20+ year tech and economics advisory firm (450+ employees, PE-backed)*

Principal Product Manager-Technical — *2024 - Present*

- Led 0→1 product strategy and go-to-market for an enterprise agentic AI platform, moving Keystone from consulting to product with 30+ engineers and data scientists; reached **$7.5M ARR** and **$25M in annualized client savings** across 5 Fortune 500 clients.
- Built a multi-agent system on LLMs, LangGraph and MCP tool access that diagnoses forecast problems and recommends fixes, with guardrails in tool definitions; staged the release through shadow mode and eval gates to **70% recommendation acceptance**, cutting **planner effort from 4 hrs/day to 4 hrs/week**.
- Prototyped an agent in Codex to prove value while resources were constrained; **over 70% of its recommendations were adopted**, which won leadership's approval to trade 2 months of planned accuracy work for agent capabilities.
- Set governance for agent actions after 60% of early automated actions were reversed: three autonomy tiers (act, recommend for approval, surface only), faithfulness evals, audit logs and a canary rollout; raised **action acceptance from 30% to 80%**.
- Ran 3 months of high-touch support with early adopters, plus interviews and workflow observation; found the blockers (explainability, review load, accuracy) and sequenced fixes, raising **forecast adoption from 50% to 70%**.
- Used agent traces to explain an adoption drop at one client (70% to 50% in 4 weeks): a warehouse move was missing from the agent's data. Added the dataset and an escalate-on-missing-data guardrail, **restoring adoption to 70%**.
- Added model routing after pilot model costs exceeded the cost of manual work, sending simple agent tasks to low-cost models and ambiguous ones to stronger models; cut **agent run cost ~30%** with lower latency and unchanged quality.
- Ran go-to-market with Sales, Marketing and Finance: demoed the platform, scoped proofs of concept and priced modular subscriptions that start with forecasting and add agents; every client renewed, and **2 upgraded to agents (+$500K ACV each)**.
- Created the paved road for app developers and scientists on the data platform: data contracts, an API catalog (schemas, auth, integration examples) and release communication; the app team **onboarded 5 client dashboards with no extra effort**.

Amazon — 2016 - 2024 (8 years)

Sr. Product Manager-Technical, Amazon Business Financing & Credit — *2022 - 2024*

- Launched Amazon Business' 0→1 ML financing product through a 5% controlled launch, experimentation and monthly VP-level reviews against an S-team goal; scaled to **50K+ customers** and **$71M in incremental revenue**.
- Wrote the PRFAQ and led a business fraud score that teams could call anywhere in the customer journey, choosing precision over recall to protect legitimate businesses; **adopted by 6 teams**, **avoiding ~$18M in fraud losses**.

Sr. Product Manager-Technical, ML Ops Developer Platform — *2020 - 2022*

- Owned vision and roadmap for a self-service ML platform on AWS SageMaker for 30+ data scientists, replacing ~1.5 months of engineering setup per model; cut **deployment time 40%** and scaled to **100+ production models with flat headcount**.
- Treated builder onboarding as a product, with templates, documentation and community support instead of asking each new team for 1 HC; cut **maintenance from 5 to 3 weeks per team** and **onboarded 5 new teams**.
- Made governance a platform default (access controls, encryption, versioning, lineage, threshold-based monitoring) under Federal Reserve model-risk rules; expanded **monitoring from 30 to all 100 production models**, avoiding **~400 science-weeks** of setup.
- Made privacy compliance a platform default under EU and US privacy law with Amazon's privacy and legal teams; **adopted across ~20 Amazon Payments teams**, saving **5 science FTE per year**.

Product Manager-Technical, Supply Chain Optimization — *2018 - 2020*

- Built and scaled ML recommendation products for inventory placement, purchase thresholds and shipping costs across thousands of sellers, unifying 50+ cost drivers from 14 teams' systems under data contracts and SLAs; delivered **$100M+ in cost savings**.

Product Manager, Amazon Pricing — *2016 - 2018*

- Launched self-service price-perception insight tools benchmarking Amazon against 800+ retailers in 17 countries; **adopted by 40+ global pricing leaders**, with signals feeding the pricing models that set Amazon's prices.

Cognizant Technology Solutions | Designed infrastructure solutions for 30+ APAC deals worth **$25M** (**45% win rate**) 2015 - 2016

EDUCATION

MBA, Marketing & Operations, IIT Roorkee (2013-15) | B.E., Chemical Engineering, Thapar University (2009-13)
