SUMMARY

Principal product manager with 11+ years shipping AI and machine learning (ML) products at scale: an agentic AI and data intelligence platform in Keystone's AI startup (**$7.5M ARR**) and ML and data platforms at Amazon (**100+ production models**, **$71M revenue**).

EXPERIENCE — 2015 - Present (11 years)

Keystone.ai, *AI division of Keystone, a 20+ year tech and economics advisory firm (450+ employees, PE-backed)*

Principal Product Manager-Technical — *2024 - Present*

- Set 0→1 product strategy and roadmap for Deep Enterprise, an enterprise agentic AI and data platform, aligning the CEO and CTO on a pivot from consulting to product and directing 30+ engineers and data scientists; reached **$7.5M ARR** and **$25M in annualized client savings** across 5 Fortune 500 clients.
- Prototyped a forecasting agent as a PoC for agentic workflow automation; its **>70% recommendation adoption** won a 2-month shift from model accuracy work to agents, then moved it from shadow mode to production.
- Designed multi-agent orchestration (LangGraph, MCP tool calling, memory, RAG) routing exceptions through triage, root-cause and action agents to human-in-the-loop approval; cut **planner effort 4 hrs/day to 4 hrs/week**, **overstock $5M to $2M**.
- Created the agent evaluation framework beyond model metrics: expert-baselined evaluation datasets, a harness comparing agent versions, prompts, tools and retrieval, and automated, LLM-as-judge and human review of task correctness, groundedness, tool compliance and action safety.
- Benchmarked LLMs on cost, latency, quality and adoption, then routed simple cases to low-cost models and ambiguous ones to stronger models; cut **agent run cost ~30%** in a pilot with lower latency and no quality loss.
- Set governance for autonomous agents after early automation saw 60% of actions reversed: 3 risk tiers (act, recommend-and-approve, surface-only), guardrails in tool definitions, audit logs and a canary rollout; lifted **action acceptance from 30% to 80%**.
- Traced agent hallucinations to missing schema context and built a runtime data catalog, AI metadata generation with confidence gates, and a semantic layer for natural-language queries; cut **repeat questions from 50% to 30%**.
- Led REI-Agent, a multi-agent financial analysis assistant for natural-language investigation of cost drivers, with automated data retrieval, variance analysis, governed enterprise metrics and auditable calculations.
- Replaced a static RAG prototype with a continuously updated knowledge retrieval pipeline (per-source chunking, quality gates, domain-adapted embeddings, feedback loop); raised **retrieval precision from 0.58 to 0.81**.
- Built a multi-tenant data platform with 8 engineers, covering ingestion, validation, lineage, anonymization, data contracts and data APIs for app developers and scientists; cut **deployment from 3 months to 3 weeks**.
- Persuaded leadership and investors to deploy as a managed service in clients' cloud instead of pure SaaS, accepting a 1-month longer deployment; won **2 additional clients** with strict data-residency needs.

Amazon — *2016 - 2024 (8 years)*

Sr. Product Manager-Technical, Amazon Business Financing & Credit — *2022 - 2024*

- Launched Amazon Business' 0→1 ML financing product with versioned REST APIs for credit eligibility at checkout and fraud decisions at sign-up, via a 5% controlled launch; scaled to **50K+ customers** and **$71M in incremental revenue**.
- Chose to build credit underwriting in-house on Amazon behavioral data rather than buy, bounding risk with exposure caps and category limits; raised **SMB approval from 4% to 15%** with **no credit losses** after full launch.
- Wrote the PRFAQ and product strategy for a business fraud score, launched after a 3-week shadow run at 99% precision; **avoided $18M in fraud losses** and became a shared capability **adopted by 6 teams**.

Sr. Product Manager-Technical, ML Ops Developer Platform — *2020 - 2022*

- Owned vision and roadmap for a SageMaker-based MLOps platform (pipelines, CI/CD, versioning, lineage, monitoring) for 30+ data scientists; cut **deployment time 40%** and scaled to **100+ production models** with flat headcount.
- Defined privacy rules for ML data with Amazon's privacy and legal teams and launched access controls, encryption and anonymization as platform defaults; adopted across **~20 Amazon Payments teams**, saving **5 science FTE/year**.

Product Manager-Technical, Supply Chain Optimization — *2018 - 2020*

- Launched TRACE, a causal decision support product that explained shipping-cost changes across 50+ drivers from 14 teams' systems and recommended the top fix to sellers via Seller Central APIs, driving **$40M of the team's $100M+ in savings**.

Product Manager, Amazon Pricing — *2016 - 2018*

- Launched self-service price-perception insight tools benchmarking Amazon against 800+ retailers in 17 countries; adopted by **40+ global pricing leaders**, with signals feeding the pricing models that set Amazon's prices.

Cognizant Technology Solutions | Designed solutions and pricing for 30+ APAC deals worth $25M (45% win rate) — *2015 - 2016*

EDUCATION

MBA, Marketing & Operations, IIT Roorkee (2013-15) | B.E., Chemical Engineering, Thapar University (2009-13)
