SUMMARY

Technical product manager with 11+ years defining and shipping AI/ML platforms and agentic systems: a multi-agent system with tool use, routing and risk-tiered autonomy, the model lifecycle platform behind 100+ production models at Amazon, and on-device LLM evaluation. Writes the specs (APIs, data contracts, launch criteria, platform policy) and drives them to shipped products with clear KPIs.

EXPERIENCE

Keystone.ai | Seattle, WA | Jun 2024 – Present

Principal Product Manager – Technical (agentic AI platform for Fortune 500 enterprises; $5M ARR)

- Built the business case and aligned the CEO and CTO on moving from consulting to a product platform. Led 0→1 strategy and roadmap with 20+ engineers and scientists, reaching $5M ARR and 5 enterprises and cutting deployment from 6 to 4 months.
- Defined and shipped a multi-agent system (LangGraph, MCP tools, memory) that routes forecast exceptions through triage, root-cause diagnosis and recommendation agents; cut planner effort from 4 hrs/day to 4 hrs/week, with 70% of recommendations accepted at launch.
- Designed model routing for agent workloads (simple cases to low-cost models, ambiguous cases to stronger ones) after testing cost, latency and quality; cut agent cost ~30% in a pilot with lower latency and no quality loss.
- Set release KPIs and acceptance criteria for agent launches: expert-baselined reference cases, a version-comparison harness, evals for groundedness, tool compliance and action safety, and shadow-mode gates (>70% recall and acceptance).
- Owned product definition for an ML forecasting system (statistical, gradient-boosted and foundation models incl. Chronos and TFT) for a Fortune 500 client; improved WAPE 21–26% over the incumbent and ran bi-weekly reviews with leadership on both sides.
- Standardized model-facing data contracts and APIs across clients instead of forcing one canonical schema, cutting client onboarding from 2 months to 2 weeks.

Amazon | Seattle, WA | Oct 2016 – Jun 2024

Sr. Product Manager – Technical

Machine Learning Platform (2020 – 2022)

- Owned vision and roadmap for a SageMaker-based ML platform covering the model lifecycle (pipelines, CI/CD, versioning, lineage, monitoring, governance) for 30+ scientists and 100+ production models. Cut deployment time 40% and doubled production models with no added headcount.
- Defined ML privacy requirements with Amazon-wide privacy bar raisers and Legal and shipped them in ~2 months instead of a 1.5-year build; adopted as standard platform policy across ~20 Amazon Payments teams, saving 5 science FTE/year.

Amazon Business Financing & Credit (2022 – 2024)

- Launched an ML-based financing product and scaled it to 50K+ customers, driving $71M in incremental revenue. Defined versioned APIs that exposed credit-eligibility and fraud decisions to checkout and onboarding.
- Scaled a global credit product through credit bureau integrations (+7% approval lift) and ML-personalized marketing ($15M incremental revenue); presented monthly program updates to VP-level leadership.

Supply Chain ML Recommendations (2018 – 2020)

- Launched TRACE, a causal recommendation engine across 50+ cost drivers owned by 14 teams; set data contracts and SLAs with upstream owners and drove $40M in savings ($100M+ across the portfolio).

Independent Projects | Seattle, WA | 2026

- **On-device LLM evaluation:** Ran quantized open-weight models (Llama, Qwen, Gemma; GGUF Q4/Q8) locally with Ollama and llama.cpp in my AI job-search system; measured latency, memory footprint and quality against cloud models to decide what runs on-device vs. in the cloud.
- **AI job-search system:** Rebuilt an LLM-driven agent as deterministic discovery plus agentic evaluation; reached 100% recall on known-job benchmark sets (Adobe, NVIDIA, CrowdStrike).

Cognizant Technology Solutions | Business Analyst | May 2015 – Sep 2016: designed infrastructure solutions and pricing with solution architects for $25M in APAC deals; 30+ deals at a 45% win rate.

SKILLS

- **AI/ML & on-device:** model lifecycle, inference pipelines, model routing, evals, Ollama, llama.cpp, GGUF quantization
- **Agentic systems:** multi-agent orchestration, tool use (MCP), LangGraph, RAG, human-in-the-loop, risk-tiered autonomy
- **Platforms:** AWS (SageMaker, Bedrock), Azure, Databricks, API and data-contract design

EDUCATION

MBA, Marketing & Operations, IIT Roorkee | B.E., Chemical Engineering, Thapar University
