SUMMARY

Principal product manager with 11+ years shipping AI and ML products at scale. Led and scaled an agentic AI platform at Keystone.ai (**$7.5M ARR**), and ML products at Amazon, including credit, fraud risk and developer APIs (**$71M revenue**, **50K+ customers**).

EXPERIENCE — 2015 - Present (11 years)

Keystone.ai, *AI division of Keystone, a 20+ year tech and economics advisory firm (450+ employees, PE-backed)*

Principal Product Manager-Technical — *2024 - Present*

- Led 0→1 product strategy, roadmap, and operating model for an enterprise AI supply chain platform, influencing C-suite executives to pivot from consulting to a product-led model; directing a cross-functional team of 30+ engineers and data scientists; reached **$7.5M ARR** and **$25M in annualized client savings** across 5 Fortune 500 clients.
- Set B2B monetization (value-based modular pricing) with Sales, Marketing and the CEO; demoed the platform, scoped a proof of concept and started clients on forecasting-only deals; **every client renewed through the product move, with no churn**, and **2 upgraded to agents (+$500K ACV each)**.
- Persuaded leadership and investors to deploy as a managed service in clients' cloud instead of pure SaaS, with APIs feeding client planning workflows; enabled **2 additional clients** with strict data-residency needs.
- Owned the data platform's API catalog (endpoints, schemas, auth, integration examples) and released communication for app developers; app team onboarded **5 new client dashboards with no extra effort**.
- Chose modular services over a monolith so Fortune 500 clients could deploy selectively, accepting 6 weeks upfront to avoid a 10× rewrite; **passed the flagship client's security review on time** and **onboarded a second client with no refactor**.
- Ran customer discovery (planner interviews, workflow observation, adoption data) to identify and prioritize top blockers impacting supply chain platform adoption, lifting **adoption from 50% to 70%**.
- Built a multi-tenant data platform with 8 engineers, defining its data contracts from SQL analysis (Athena) for client order, shipment, and promotion data; cut **deployment from 3 months to 3 weeks**.
- Launched a multi-agent system (LLMs, RAG, LangGraph, MCP) that triages exceptions, automates only low-risk, reversible decisions and routes the rest to human-in-the-loop review; shipped through evaluation gates, achieving **>70% recommendation acceptance**, cutting reviewer effort from **4 hrs/day to 4 hrs/week** and overstock from **$5M to $2M**.

Amazon — *2016 - 2024 (8 years)*

Sr. Product Manager-Technical, Amazon Business Financing & Credit — *2022 - 2024*

- Launched Amazon Business' ML financing product via experimentation, a 5% controlled launch, biweekly Agile sprints and written monthly VP-level business reviews against an S-team goal; scaled to **50K+ customers** and **$71M in incremental revenue**.
- Prioritized batch over real-time credit decisions to **launch 3 months earlier**, managing risk with exposure caps and category limits; defined versioned REST APIs for fraud checks at signup and real-time credit eligibility at checkout.
- Owned fraud strategy for Amazon Business' Pay by Invoice credit product that assessed every business from sign-up to first order; **avoided $18M in fraud losses** and was **adopted by 6 teams**.
- Set fraud score at 99% precision after a 3-week shadow run to protect legitimate businesses, layered with checkout controls; added behavioral and IP signals that **caught fraudsters 10 days earlier** and **lifted upfront fraud detection 14–15%.**
- Corrected a data bias in SMB credit underwriting, where thin credit files held small-business approval at 4%; rebuilt the model on Amazon behavioral data, raising **SMB approval to 15%** with **no credit losses** after full launch.

Sr. Product Manager-Technical, ML Ops Developer Platform — *2020 - 2022*

- Owned vision and roadmap for a SageMaker-based MLOps platform for 30+ risk and credit data scientists, treating onboarding as a product (templates, docs, community); cut **deployment time 40%** and scaled to **100+ production models** with flat headcount.

Product Manager-Technical, Supply Chain Optimization — *2018 - 2020*

- Built SPORT, an ML inventory-recommendation product, and exposed it through Selling Partner APIs; **3 partner teams integrated it**, including Seller Central and inventory placement, to act on recommendations at scale; **adoption rose from 1% to 10%**.
- Built MOQ recommendation APIs, used by Seller Central and 2 Asian marketplaces, setting order minimums for 20K sellers; a controlled experiment found **~60% higher seller adherence** with no conversion loss and **$20M in seller shipping savings**.
- Launched TRACE, a causal decision support product that explained shipping-cost changes across 50+ drivers from 14 teams' systems and recommended the top fix to sellers via Seller Central APIs, driving **$40M of the team's $100M+ in savings**.

Product Manager, Amazon Pricing — *2016 - 2018*

- Launched self-service price-perception insight tools benchmarking Amazon against 800+ retailers in 17 countries; adopted by **40+ global pricing leaders**, with signals feeding the pricing models that set Amazon's prices.

Cognizant Technology Solutions | Designed solutions and pricing for 30+ APAC deals worth $25M (45% win rate) — *2015 - 2016*

EDUCATION

MBA, Marketing & Operations, IIT Roorkee (2013-15) | B.E., Chemical Engineering, Thapar University (2009-13)
