SUMMARY

Principal product manager with 11+ years shipping AI/ML products at scale: agentic AI, model orchestration, and ML platforms in Keystone's AI startup division (**$5M ARR**) and at Amazon (**100+ production models**, **$71M** revenue), aligning C-suite leaders.

EXPERIENCE — 2015 - Present (11 years)

Keystone.ai | *AI division of Keystone, a 20+ year tech and economics advisory firm ($100M PE-backed)*

Principal Product Manager-Technical — *2024 - Present*

- Led product strategy, business case, and roadmap for an enterprise agentic AI and forecasting platform, aligning the CEO and CTO to pivot from consulting to product; reached **$5M ARR** and **$25M** annual client savings across **5 Fortune 500 clients**.
- Shipped a multi-agent system (LLMs, LangGraph, MCP tool use, RAG) routing forecast exceptions through triage, root-cause, and action agents with human approval; **70% accepted**, cutting planner effort **4 hrs/day to 4 hrs/week** and overstock **$5M to $2M**.
- Owned orchestration and model routing for agent workloads (simple tasks to low-cost models, ambiguous ones to stronger models) based on cost, latency, and quality tests; cut agent run cost **~30%** in a pilot with lower latency.
- Defined KPIs and conformance criteria for agent releases: expert-baselined reference cases, a version-comparison harness, and evals for groundedness, tool compliance, and action safety; agents cleared shadow-mode gates before production.
- Owned product definition for a forecasting system (statistical, gradient-boosted, and foundation models incl. Chronos and TFT) for a Fortune 500 client, with bi-weekly leadership reviews; improved accuracy **up to 26%** over the incumbent.
- Built the multi-tenant data platform with 8 engineers, defining data contracts, APIs, lineage, and anonymization standards across clients; cut deployment from **3 months to 3 weeks**.
- Delivered the platform MVP in 3 months with 30+ engineers and data scientists across 3 parallel product lanes with milestones and cross-functional reviews; also mentored 3 dotted-line PMs.

Amazon — 2016 - 2024 (8 years)

Sr. Product Manager-Technical, Amazon Business Financing & Credit — *2022 - 2024*

- Launched Amazon Business' ML financing product with versioned APIs serving credit eligibility at checkout and fraud decisions at onboarding, via experimentation and a 5% controlled launch; scaled to **50K+ customers** and **$71M** in incremental revenue.
- Integrated third-party credit bureau partner data into a global consumer credit product and redesigned onboarding, raising data coverage **17%** and approvals **7%** and cutting abandonment **50%**.

Sr. Product Manager-Technical, ML Ops Developer Platform — *2020 - 2022*

- Owned vision and roadmap for a SageMaker-based ML platform covering the ML model lifecycle (pipelines, CI/CD, lineage, monitoring) for 30+ data scientists; cut deployment time **40%** and scaled to **100+ production models** with flat headcount.
- Wrote the ML data privacy specification with Amazon's privacy and legal teams and launched access controls, encryption, and anonymization as platform defaults; adopted across **~20 Amazon Payments teams**, saving **5 science FTE/year**.

Product Manager-Technical, Supply Chain Optimization — *2018 - 2020*

- Built and scaled ML recommendation products for inventory placement, purchase thresholds, and shipping costs across thousands of sellers, unifying 50+ cost drivers from 14 teams' systems under data contracts and SLAs; saved **$100M+**.

Product Manager, Amazon Pricing — *2016 - 2018*

- Launched self-service price-perception tools benchmarking Amazon against 800+ retailers in 17 countries for competitive intelligence; adopted by **40+ global pricing leaders**, with signals feeding Amazon's pricing models.

Cognizant Technology Solutions | Designed solutions and pricing for 30+ APAC deals worth **$25M** (**45% win rate**) — *2015 - 2016*

INDEPENDENT PROJECTS — 2026

- Ran quantized open-weight models (Llama, Qwen, Gemma; GGUF Q4/Q8) on-device with Ollama and llama.cpp in an AI job-search system, comparing inference latency, memory, and quality against cloud models to design hybrid on-device/cloud routing.
- Rebuilt an LLM-driven job-discovery agent as deterministic discovery plus agentic evaluation after diagnosing incomplete searches; reached **100% recall** on known-job benchmarks at Adobe, NVIDIA, and CrowdStrike.

EDUCATION

MBA, Marketing & Operations, IIT Roorkee (2013-15) | B.E., Chemical Engineering, Thapar University (2009-13)
