SHIFIA MITTAL

Seattle, WA (open to remote) | 206-356-6348 | shifia.mittal09@gmail.com | linkedin.com/in/shifiamittal

SUMMARY

Technical product manager who builds and launches machine learning products with engineers, data scientists, and researchers: recommendation systems, ML personalization, credit-risk models, and AI agents. Launched and scaled an ML financing product on Amazon Business to 50K+ customers ($71M incremental revenue) and ML recommendation products that delivered $100M+ in savings. Hands-on with prototypes, evaluation, and safety guardrails, and runs programs from strategic plan to executive readout.

EXPERIENCE

Keystone.ai | Seattle, WA | Jun 2024 – Present
Principal Product Manager – Technical (AI decision platform for Fortune 500 enterprises; $5M ARR)

- Launched a multi-agent recommendation system (exception detection, root-cause diagnosis, RAG-grounded recommendations, human approval) through shadow-mode launch gates; 70% of recommendations adopted, and planner effort fell from 4 hrs/day to 4 hrs/week.
- Led 0→1 strategy and roadmap for an AI decision platform with the CEO/CTO and 20+ engineers and scientists; improved forecast WAPE 21%, cut deployment from 6 to 4 months, and scaled to 5 enterprises.
- Designed AI safety and evaluation: risk-tiered autonomy, audit logs, and evals for correctness, groundedness, tool compliance, action safety, and regression; contributed to a cumulative drop in override rate from 50% to 20%.
- Lifted forecast adoption from 50% to 70% by pairing adoption metrics with user interviews and workflow observation, then sequencing explainability before automation.

Amazon | Seattle, WA | Oct 2016 – Jun 2024
Sr. Product Manager – Technical
Amazon Business Financing & Credit (2022 – 2024)

- Launched an ML-based financing product on the Amazon Business website and scaled it to 50K+ customers, driving $71M in incremental revenue; owned discovery, experimentation, a 5% controlled launch, and rollout across growth and risk outcomes.
- Scaled a global consumer credit product through ML-personalized marketing ($15M incremental revenue), credit bureau integrations (+17% data coverage, +7% approval lift), and an onboarding redesign that cut abandonment 50%.
- Owned fraud-prevention decisions for the credit product: integrated a business fraud-score model before credit assessment and post-checkout fraud screening, and set the fraud threshold at 99% precision (1% false-discovery rate) to protect legitimate customers, backed by domain blocklists and suspension rules.
- Redesigned underwriting and risk controls (exposure caps by risk tier, restricted high-loss categories, transaction-level controls); raised SMB approval from 4% to 15%, with no credit losses after full launch.
- Ran the multi-year credit growth strategy, tied to an Amazon S-team goal to grow lending, through annual OKRs, quarterly milestones, and biweekly sprints; presented monthly program updates to VP-level leadership.

Machine Learning Platform (2020 – 2022)

- Owned vision and roadmap for a SageMaker-based ML platform that 30+ scientists used to deploy, evaluate, and monitor 100+ production models; cut model deployment time 40% and doubled production models with no added headcount.
- Productized model governance, lineage, and privacy compliance with 10 privacy bar raisers and legal; saved 6 science headcount.

Supply Chain ML Recommendations (2018 – 2020)

- Built and scaled ML recommendation and causal-attribution products for inventory, pricing, and shipping decisions across thousands of sellers, delivering $100M+ in cost savings.
- Scaled MOQ recommendations to 20K merchants and 120K offers, driving ~60% higher adherence with no measurable conversion decline before full rollout.
- Launched TRACE, a causal recommendation engine across 50+ shipping-cost drivers owned by 14 teams; drove $40M in savings.

Cognizant Technology Solutions | Business Analyst | May 2015 – Sep 2016: designed service solutions and pricing for $25M in APAC deals.

SKILLS

- **Product & program:** strategy, roadmapping, program planning, OKRs, executive reporting, experimentation
- **Machine learning & AI:** recommendation systems, personalization, credit-risk models, multi-agent systems, RAG, evals
- **Trust, integrity & risk:** fraud prevention, precision/recall thresholds, risk controls, AI safety guardrails, privacy

EDUCATION

MBA, Marketing & Operations, IIT Roorkee | B.E., Chemical Engineering, Thapar University
