SUMMARY

Principal product manager with 11+ years shipping AI/ML products and enabling technical teams to adopt them: built enterprise agents with evaluation gates at Keystone (**$7.5M ARR**) and an ML platform for 30+ scientists at Amazon.

EXPERIENCE — 2015 - Present (11 years)

Keystone.ai | *AI division of Keystone, a 20+ year tech and economics advisory firm (450+ employees, PE-backed)*
Principal Product Manager-Technical — *2024 - Present*

- Led strategy and roadmap for Deep Enterprise, Keystone's enterprise AI supply chain platform (forecasting models and agentic workflows), and helped move the company from consulting to a product-led model. The platform reached **$7.5M ARR** and **$25M in annualized client savings** across 5 Fortune 500 clients.
- Raised forecast adoption **from 50% to 70%** across client planners by interviewing them, observing their workflows and analyzing usage data to find the top 3 blockers. Shipped SHAP explainability, then agent support, and led change management.
- Rebuilt the planner workflow around exceptions, not forecast accuracy. A hands-on Codex prototype won a 2-month roadmap shift to agents; the launched multi-agent system (LLMs, RAG, LangGraph, MCP) with human review passed evaluation gates for groundedness, tool compliance and action safety, hit 70% acceptance and cut **planner effort from 4 hrs/day to 4 hrs/week**.
- Passed the flagship client's security review on time by deploying as a managed service in the client's cloud instead of pure SaaS, which also **won 2 additional clients** with strict data-residency needs.
- Built the multi-tenant data platform and governance layer with 8 engineers (anonymization, lineage, data contracts, PII blocking), cutting **deployment from 3 months to 3 weeks**. Introduced it to 25+ scientists in a live demo to drive use.
- Cut **agent run cost ~30%** by testing models on cost, latency, quality and adoption, then routing simple cases to low-cost models and ambiguous ones to stronger models.
- Set tiered subscription pricing by scope, features and implementation, rejecting usage-based and percentage-of-savings models because neither tracked client value reliably. Gave clients budget predictability.
- Also launched two internal AI assistants for Keystone's finance teams: HAT-AI, which automates roadmap reporting, leadership newsletters and knowledge search for 30 PMs across 15 products and saved **120 hrs/week**, and REI-Agent, which answers cost-driver questions in plain language using governed metrics and auditable calculations.

AI job-search agent | Built with Claude Code and Codex; **100% recall** on 3 benchmark job sets — 2026

Amazon — 2016 - 2024 (8 years)

Sr. Product Manager-Technical, Amazon Business Financing & Credit — *2022 - 2024*

- Wrote the vision to converge 6 credit assessment services, 3 analyst tools and the rule libraries for small-business lending, evaluated 3 vendors for Central Rules Engine capabilities, then built in-house and designed its MVP.
- Corrected a data bias in SMB credit underwriting, where thin credit files held small-business approval at 4%; rebuilt the model on Amazon behavioral data, raising SMB approval to **15%** with **no credit losses** after full launch.
- Applied responsible AI to credit and fraud models in regulated lending by explaining every declined application with adverse-action reason codes and setting the fraud threshold at 99% precision, clearing regulatory review with Amazon's financial risk teams without blocking legitimate businesses.

Sr. Product Manager-Technical, ML Ops Developer Platform — *2020 - 2022*

- Owned vision and roadmap for an AWS SageMaker-based MLOps platform serving 30+ data scientists; cut deployment time **40%**, scaled to **100+ production models** with no added headcount, and made production monitoring the default.
- Treated onboarding as a product: trained 30+ scientists and 15+ org leaders on how the platform works, and added docs and community support after a competing internal platform proved easier to adopt. Onboarding fell **from 5 to 3 weeks per team**.
- Made privacy a platform default: launched access controls, encryption, and anonymization, and defined privacy rules for ML data with Amazon's privacy and legal teams; adopted across **~20 Amazon Payments teams**, saving **5 science FTE per year**.

Product Manager-Technical, Supply Chain Optimization — *2018 - 2020*

- Built ML recommendation products for inventory, pricing, and shipping decisions across thousands of sellers, aligning 20+ senior stakeholders and persuading the VP of Amazon FBA to let the product recommend inventory placement; **$100M+ in savings**.

Product Manager, Amazon Pricing — *2016 - 2018*

- Launched self-service price-perception insight tools benchmarking Amazon against 800+ retailers in 17 countries; adopted by **40+ global pricing leaders**, with signals feeding the pricing models that set Amazon's prices.

Cognizant Technology Solutions | Designed solutions and pricing for 30+ APAC deals worth **$25M** (**45% win rate**) — *2015 - 2016*

EDUCATION

MBA, Marketing & Operations, IIT Roorkee (2013-15) | B.E., Chemical Engineering, Thapar University (2009-13)
