SUMMARY

Product manager who takes AI and data-intensive B2B products from customer discovery through delivery and adoption. Builds AI-assisted review workflows where models flag issues and expert users approve them, including a multi-agent system that cut planner review from 4 hrs/day to 4 hrs/week. Learns technical domains fast (supply chain planning, consumer credit, ML operations), earns credibility with expert users through workflow observation, and aligns executives (CEO/CTO at Keystone, VP-level leaders at Amazon) and engineering through clear written decision docs.

EXPERIENCE

Keystone.ai | Seattle, WA | Jun 2024 – Present

Principal Product Manager – Technical (AI decision platform for Fortune 500 enterprises; $5M ARR)

- Launched an AI-assisted review workflow for enterprise demand planners: a multi-agent system that flags exceptions, diagnoses root causes, and recommends actions for human approval; shipped through shadow-mode launch gates (>70% exception recall and acceptance), cutting review time from 4 hrs/day to 4 hrs/week.
- Ran 0→1 discovery on the agent bet: prototyped it in Codex, tested it with planners (>70% of recommendations adopted), and used the evidence to win leadership approval to trade 2 months of planned model-accuracy work for it.
- Led 0→1 strategy and roadmap for Deep Enterprise, the product behind Keystone's move from consulting to a product-led model, with the CEO/CTO and 20+ engineers and scientists; improved forecast WAPE 21% vs. the incumbent, cut deployment from 6 to 4 months, and scaled to 5 enterprises.
- Earned credibility with expert demand planners through ~3 months of high-touch support, interviews, and workflow observation; sequenced explainability before automation and lifted forecast adoption from 50% to 70%.
- Set evaluation and launch thresholds for AI recommendations against expert-baseline reference cases (groundedness, tool compliance, action safety, regression); when adoption at one retailer fell from 70% to 50%, traced the cause in production and restored it to 70%.
- Built a multi-tenant cloud data platform across AWS and Azure (ingestion, validation, lineage, APIs, data contracts) with 7–8 engineers; cut client onboarding from 2 months to 2 weeks.

Amazon | Seattle, WA | Oct 2016 – Jun 2024

Sr. Product Manager – Technical

Amazon Business Financing & Credit (2022 – 2024)

- Launched an ML-based financing product on Amazon Business and scaled it to 50K+ customers ($71M incremental revenue), redesigning it around monthly eligibility after customer interviews in a 5% launch; presented monthly product updates to VP-level leadership.
- Scaled the credit product through ML-personalized marketing ($15M incremental revenue), credit bureau integrations (+17% data coverage, +7% approval lift), and an onboarding redesign that cut abandonment 50%.

Machine Learning Platform (2020 – 2022)

- Owned vision, roadmap, and adoption for a SageMaker-based ML platform that 30+ scientists used to deploy, evaluate, and monitor 100+ production models; cut deployment time 40% and doubled production models with no added headcount.
- Defined how privacy requirements applied to ML with Amazon privacy bar raisers and Legal; shipped a semi-automated solution in ~2 months, approved by Amazon's Director of Data Privacy and Compliance as platform policy across Payments (~20 teams).

Supply Chain ML Recommendations (2018 – 2020)

- Built and scaled three ML recommendation products for sellers: inventory placement (SPORT), purchase thresholds (MOQ, 20K merchants, ~60% higher adherence), and causal shipping-cost attribution (TRACE, 50+ drivers across 14 systems); delivered $100M+ in cost savings, including $40M from TRACE.
- Won the VP of Amazon FBA's approval for SPORT to recommend inventory placement to sellers; used seller research to redesign discoverability and execution, lifting adoption ~10%.

Cognizant Technology Solutions | Business Analyst | May 2015 – Sep 2016: solution design and pricing for $25M in APAC deals.

SKILLS

Product: customer discovery, 0→1 bets, build/kill decisions, prioritization, written decision docs, adoption
AI & data: AI-assisted review, human-in-the-loop design, evals and launch thresholds, ML platforms, agents
Platform & tools: cloud data platforms (AWS, Azure), APIs, integrations; AI prototyping (Codex, Replit Agent)

EDUCATION

MBA, Marketing & Operations, IIT Roorkee | B.E., Chemical Engineering, Thapar University
